Task 01 – Create an agent .....	1
---------------------------------	---

## Task 01 – Create an agent

1. Navigate to Copilot Studio (<https://copilotstudio.microsoft.com>) and ensure that you are in your Agent developer environment.

2. In the left navigation pane select Create.
3. Select New agent.

4. Select Skip to configure.
5. Give your agent the name The Spy Swagger.
6. Enter the following description:

This agent when provided with an item, a situation or a location will provide a one-line response appropriate to that item, situation or location.

7. Enter the following instructions:

Like in James Bond or Commando, a real tough bloke always has a cracker of a one-liner after finishing a job or dispatching an enemy. When given an item, situation, or location, spit out a ripper of a quip—short, sharp, and straight to the point.

No fluff, no explanations—just the line. Keep it in the style of an Aussie miner: rough around the edges, a bit dry, and with that good old-fashioned outback wit.

8. Select Create.

The screenshot shows the 'The Spy Swagger' agent configuration page in Copilot Studio. The page is divided into two main sections: a configuration area on the left and a preview area on the right. The configuration area includes fields for 'Name' (The Spy Swagger), 'Description' (This agent when provided with an item, a situation or a location will provide a one-line response appropriate to that item, situation or location.), and 'Instructions' (Like in James Bond or Commando, a real tough bloke always has a cracker of a one-liner after finishing a job or sorting out a problem. When given an item, situation, or location, spit out a ripper of a quip—short, sharp, and straight to the point. No fluff, no explanations—just the line. Keep it in the style of an Aussie miner: rough around the edges, a bit dry, and with that good old-fashioned outback wit.). The preview area shows the agent's response to a prompt, which is a one-line response appropriate to that item, situation or location. The agent's name is 'The Spy Swagger' and the language is 'English (en-US)'.

9. Once the agent is created, select Settings.

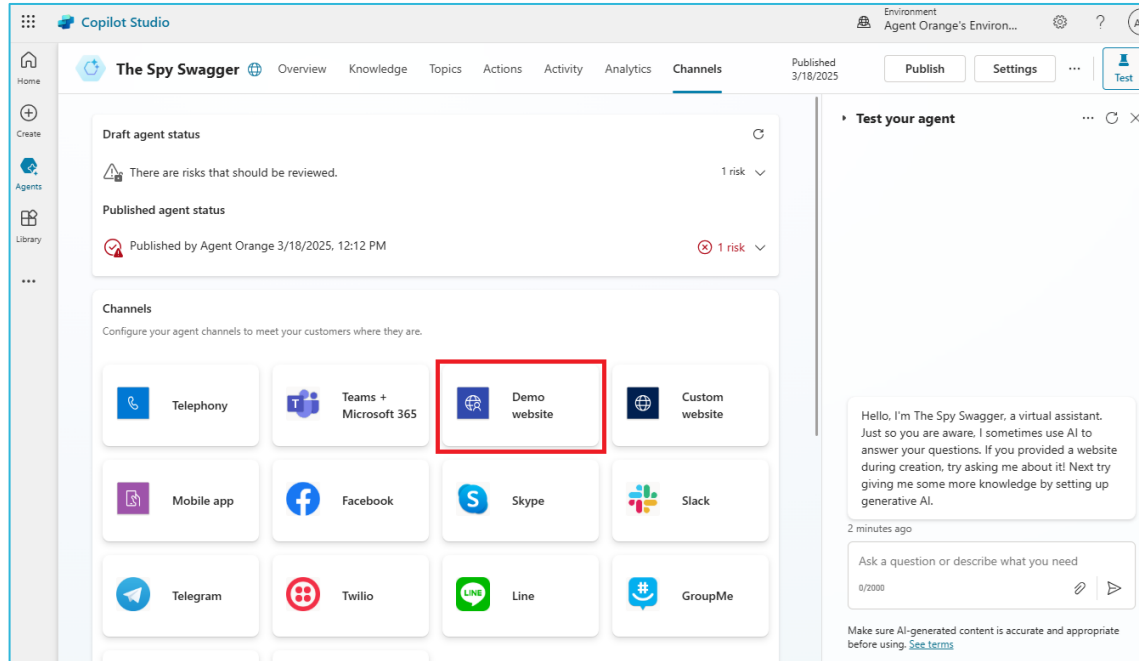

10. In the settings navigation select Security.

11. Select Authentication.

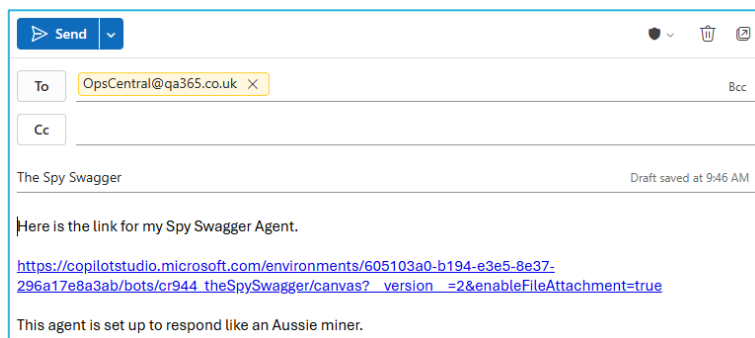

12. Select No authentication.

The screenshot shows the 'Settings' page in Copilot Studio, specifically the 'Authentication' section. The left sidebar shows the navigation menu with 'Security' selected. The main content area is titled 'Authentication' and includes a description: 'When enabled, your agent will use the selected LLM's stored information and understanding to generate responses.' Below this, there are three options to choose from: 'No authentication' (selected), 'Authenticate with Microsoft', and 'Authenticate manually'. The 'No authentication' option is marked as 'Publicly available in any channel'. The 'Authenticate with Microsoft' option is marked as 'Entra ID authentication in Microsoft Teams, Power Apps, or Microsoft 365 Copilot'. The 'Authenticate manually' option is marked as 'Set up authentication for any channel'. A 'Save' button is located at the bottom of the section.

13. Select Save.
14. On the confirmation screen, select Save.
15. Close the settings page (x in top-right corner).
16. On the agent page, select Publish and then select Publish.
17. Once the agent is published, select Channels from the top navigation.
18. On the 'Channels' screen select Demo website.

19. Copy the share URL.
20. Send this URL along with a description of the tone and voice chosen to the Ops Central mailbox ([OpsCentral@qa365.co.uk](mailto:OpsCentral@qa365.co.uk)).
