

# Mission: AI Possible

## Mission 1 – The Spy Swagger

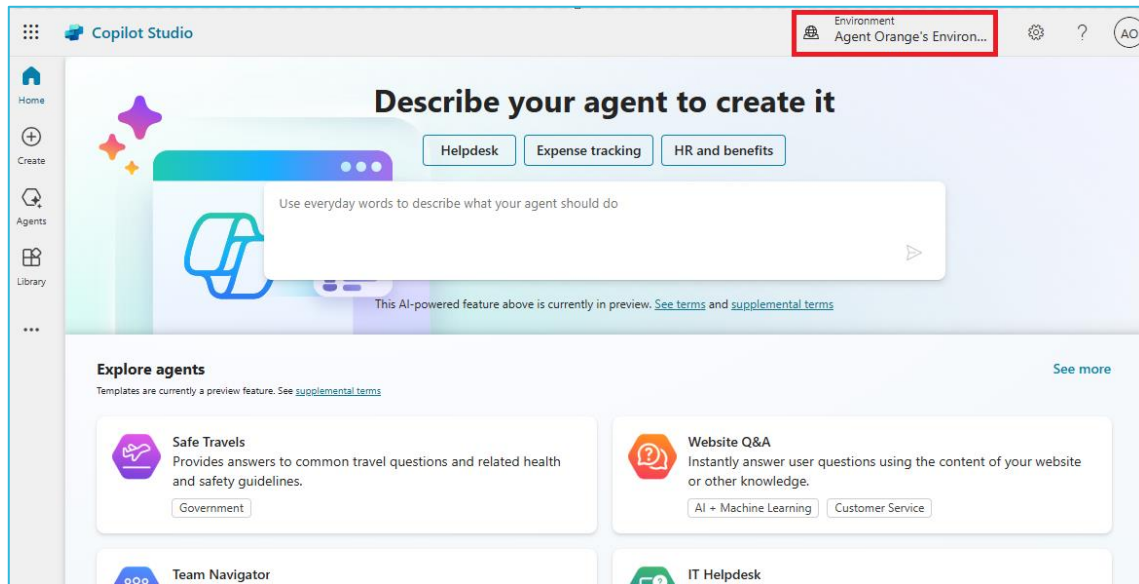

## Contents

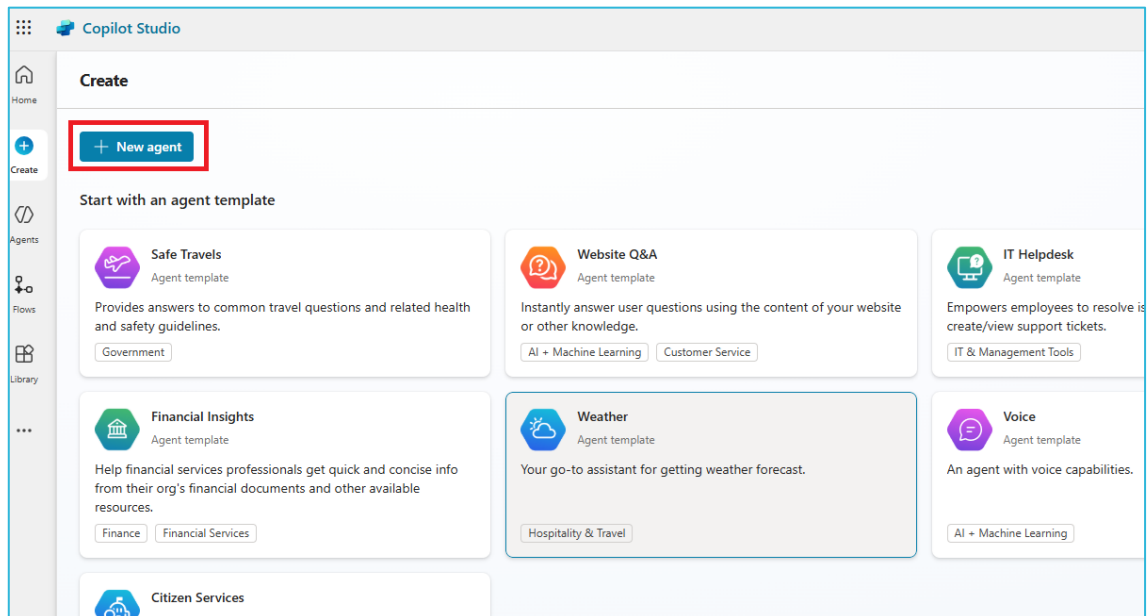

Task 01 – Create an agent .....	1
---------------------------------	---

## Task 01 – Create an agent

1. Navigate to Copilot Studio (<https://copilotstudio.microsoft.com>) and ensure that you are in your Agent developer environment.

2. In the left navigation pane select Create.
3. Select New agent.

4. Select Skip to configure.
5. Give your agent the name The Spy Swagger.
6. Enter the following description:

This agent when provided with an item, a situation or a location will provide a one-line response appropriate to that item, situation or location.

## 7. Enter the following instructions:

Like in James Bond or Commando, a real tough bloke always has a cracker of a one-liner after finishing a job or dispatching an enemy. When given an item, situation, or location, spit out a ripper of a quip – short, sharp, and straight to the point.

No fluff, no explanations – just the line. Keep it in the style of an Aussie miner: rough around the edges, a bit dry, and with that good old-fashioned outback wit.

## 8. Select Create.

The screenshot shows the Copilot Studio interface for creating an agent named 'The Spy Swagger'. The language is set to English (en-US). The agent's name is 'The Spy Swagger'. The description is 'This agent when provided with an item, a situation or a location will provide a one-line response appropriate to that item, situation or location.' The instructions are 'Like in James Bond or Commando, a real tough bloke always has a cracker of a one-liner after finishing a job or sorting out a problem. When given an item, situation, or location, spit out a ripper of a quip—short, sharp, and straight to the point. No fluff, no explanations—just the line. Keep it in the style of an Aussie miner: rough around the edges, a bit dry, and with that good old-fashioned outback wit.' The 'Create' button is visible in the top right corner.

## 9. Once the agent is created, select Settings.

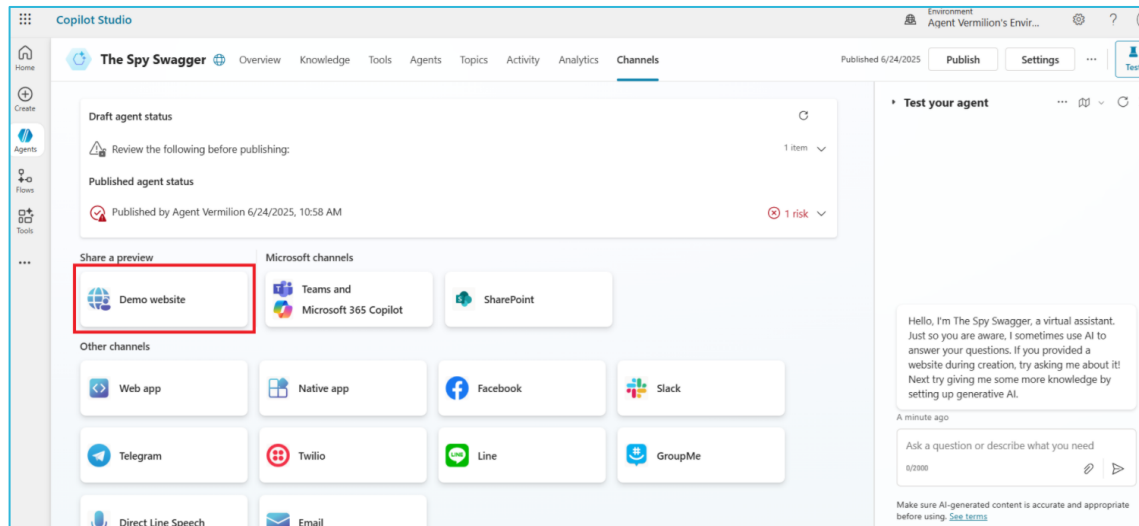

## 10. In the settings navigation select Security.

## 11. Select Authentication.

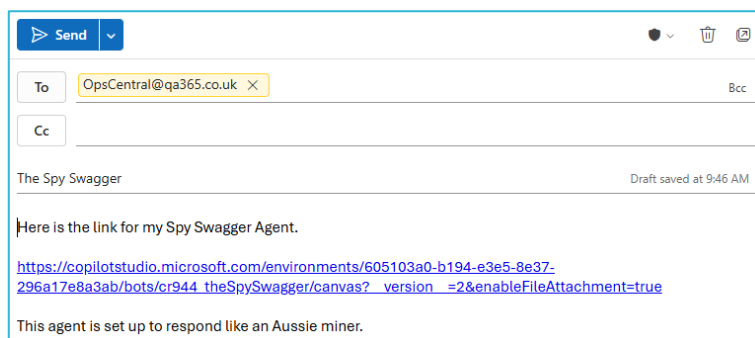

## 12. Select No authentication.

The screenshot shows the Copilot Studio 'Settings' page. The left sidebar contains navigation options: Home, Create, Agents, Library, and a menu icon. The main content area is titled 'Settings' and has a sub-section 'Authentication'. The text reads: 'When enabled, your agent will use the selected LLM's stored information and understanding to generate responses.' Below this, there are three options: 'No authentication' (selected), 'Authenticate with Microsoft', and 'Authenticate manually'. The 'No authentication' option is described as 'Publicly available in any channel'. The 'Authenticate with Microsoft' option is described as 'Entra ID authentication in Microsoft Teams, Power Apps, or Microsoft 365 Copilot'. The 'Authenticate manually' option is described as 'Set up authentication for any channel'. A 'Save' button is at the bottom.

13. Select Save.
14. On the confirmation screen, select Save.
15. Close the settings page (x in top-right corner).
16. On the agent page, select Publish and then select Publish.
17. Once the agent is published, select Channels from the top navigation.
18. On the 'Channels' screen select Demo website.

19. Copy the share URL.
20. Send this URL along with a description of the tone and voice chosen to the Ops Central mailbox ([OpsCentral@qa365.co.uk](mailto:OpsCentral@qa365.co.uk)).
